NAME
zlib – compression/decompression library

SYNOPSIS
[see zlib.h for full description]

DESCRIPTION
The zlib library is a general purpose data compression library. The code is thread safe, assuming
that the standard library functions used are thread safe, such as memory allocation routines. It
provides in-memory compression and decompression functions, including integrity checks of the
uncompressed data. This version of the library supports only one compression method (deflation)
but other algorithms may be added later with the same stream interface.

Compression can be done in a single step if the buffers are large enough or can be done by
repeated calls of the compression function. In the latter case, the application must provide more
input and/or consume the output (providing more output space) before each call.

The library also supports reading and writing files in gzip(1) (.gz) format with an interface similar
to that of stdio.

The library does not install any signal handler. The decoder checks the consistency of the com-
pressed data, so the library should never crash even in the case of corrupted input.

All functions of the compression library are documented in the file zlib.h. The distribution source
includes examples of use of the library in the files test/example.c and test/minigzip.c, as well as
other examples in the examples/ directory.

Changes to this version are documented in the file ChangeLog that accompanies the source.

zlib is available in Java using the java.util.zip package:
http://java.sun.com/developer/technicalArticles/Programming/compression/

A Perl interface to zlib, written by Paul Marquess (pmqs@cpan.org), is available at CPAN (Com-
prehensive Perl Archive Network) sites, including:
http://search.cpan.org/~pmqs/IO-Compress-Zlib/

A Python interface to zlib, written by A.M. Kuchling (amk@magnet.com), is available in Python
1.5 and later versions:
http://docs.python.org/library/zlib.html

zlib is built into tcl:
http://wiki.tcl.tk/4610

An experimental package to read and write files in .zip format, written on top of zlib by Gilles Vol-
lant (info@winimage.com), is available at:
http://www.winimage.com/zLibDll/minizip.html and also in the contrib/minizip directory of
the main zlib source distribution.

SEE ALSO
The zlib web site can be found at:
http://zlib.net/

The data format used by the zlib library is described by RFC (Request for Comments) 1950 to
1952 in the files:
http://tools.ietf.org/html/rfc1950 (for the zlib header and trailer format)
http://tools.ietf.org/html/rfc1951 (for the deflate compressed data format)
http://tools.ietf.org/html/rfc1952 (for the gzip header and trailer format)

Mark Nelson wrote an article about zlib for the Jan. 1997 issue of Dr. Dobb’s Journal; a copy of
the article is available at:
REPORTING PROBLEMS

Before reporting a problem, please check the zlib web site to verify that you have the latest version of zlib; otherwise, obtain the latest version and see if the problem still exists. Please read the zlib FAQ at:

http://zlib.net/zlib_faq.html

before asking for help. Send questions and/or comments to zlib@gzip.org, or (for the Windows DLL version) to Gilles Vollant (info@winimage.com).

AUTHORS

Version 1.2.8 Copyright (C) 1995-2013 Jean-loup Gailly (jloup@gzip.org) and Mark Adler (madler@alumni.caltech.edu).

This software is provided “as-is,” without any express or implied warranty. In no event will the authors be held liable for any damages arising from the use of this software. See the distribution directory with respect to requirements governing redistribution. The deflate format used by zlib was defined by Phil Katz. The deflate and zlib specifications were written by L. Peter Deutsch. Thanks to all the people who reported problems and suggested various improvements in zlib; who are too numerous to cite here.
